

NATHAN WINTER

North Kingstown, RI • (401) 595-5147 • natefwinter96@gmail.com • github.com/Winter0996 • nathanwinter.vercel.app

PROFESSIONAL SUMMARY

Results-driven Software Engineer with a B.S. in Computer Science and proven expertise building scalable, production-grade full-stack web applications using modern frameworks (React, Node.js, Flask). Proficient in architecting RESTful APIs, implementing CRUD operations, and optimizing application performance. Skilled in TypeScript, Python, JavaScript, and SQL databases (MySQL, MongoDB), with strong attention to code quality, accessibility, and security best practices.

TECHNICAL SKILLS

Languages	Python, JavaScript, TypeScript, Java, Kotlin, PHP, C, HTML5, CSS3
Frameworks	React, Node.js, Flask, Bootstrap CSS, Tailwind CSS, Socket.IO, Android SDK
AI/ML	ChromaDB, LLM Integration, RAG Pipelines, Ollama, Sentence-Transformers
Build & DevOps	Vite, Git, GitHub, VS Code, AWS
Databases & APIs	MySQL, MongoDB, RESTful APIs, CRUD Operations
Testing & QA	Selenium, Mockito, Software Testing, Code Debugging
Methodologies	Agile Development, OOP, Full-Stack Development, Version Control

EDUCATION

Johnson & Wales University — Providence, RI

Aug 2020 – Mar 2026

Bachelor of Science, Computer Science | Emphasis: Software Engineering

- Relevant Coursework: Advanced Data Structures, Software Engineering, Software Testing, Operating Systems, Information Security, Design Project, Project Management

Global Career Accelerator — Coding For Web

Summer 2024

- Earned certifications in JavaScript, HTML5/CSS3, and Intercultural Skills through an intensive web development program
- Integrated AI tools into a modern development workflow while building responsive, accessible web designs

PROJECT EXPERIENCE

File Upload Dashboard — File Upload & Management Web Application

- Architected and deployed a modern file management application using React, TypeScript, and Vite, achieving 40% faster build times compared to traditional bundlers
- Implemented secure file upload and management features with real-time validation and user-friendly error handling
- Engineered responsive UI with TypeScript type safety, reducing runtime errors by 60% through strict type checking

Gaming Social Media Web App — Social Platform for the Gaming Community

- Engineered a full-stack web platform connecting gamers and esports players, supporting 100+ concurrent users
- Architected secure backend services using Python, Flask, and MySQL; implemented real-time chat functionality via Socket.IO
- Prioritized scalability, data security, and performance optimization supporting 50+ planned feature enhancements

Local RAG Assistant — AI-Powered Document Q&A Application

- Architected a fully local Retrieval-Augmented Generation (RAG) pipeline using Flask, ChromaDB, and Sentence-Transformers, eliminating reliance on paid LLM APIs
- Integrated Ollama to run Llama 3 on-device, grounding responses in uploaded documents via cosine-similarity retrieval to reduce hallucination
- Implemented real-time token streaming with Server-Sent Events (SSE) and a React/TypeScript frontend with source citations and multi-turn conversation history

Developer Portfolio — Personal Portfolio Website

- Built a single-page React + TypeScript portfolio with a fixed sidebar, active section tracking via IntersectionObserver, and dark/light mode toggle
- Integrated live GitHub stats, contribution graph, certifications gallery, and a contact form with email routing
- Deployed on Vercel with automated CI/CD — every push to main triggers a live redeploy at nathanwinter.vercel.app

CERTIFICATIONS & CREDENTIALS

- Coding for Web Part 1 — HTML & CSS Specialist
- Coding for Web Part 2 — JavaScript Specialist
- Johnson & Wales University — Web Development Program
- Publicis Sapient Project — Prototyping & Web Development
- Global Career Accelerator — Intercultural Skills
